

injinji
Performance Toesocks

Why Injinji?

The key design principal in the development of the Tetratsok was to create the best possible interface that allowed the entire foot to perform naturally and freely inside our shoes, just like being barefoot. Everything about the conventional tube sock works against your feet's natural form and function.

- » engages the toes
- » increased dexterity
- » blister prevention
- » cooler: less skin-skin heat

"Injinji" is pronounced (In-gin-ji) and is an African term which describes when a drumming circle reaches a climax, the peak in the performance, when all of the participants are at one with the rhythm... a unison among all.
